Parts of the ukulele

Open Strings

Goats Can Eat Anything

Like the first 4 strings of a guitar with a capo at fret V

Tuning the ukulele to itself

Fret the 4th string at the 5th fret and compare to 3rd string. Use 4th fret for 3rd string, 5th for 2nd.

If you don't have an electronic tuner, you can fret the uke strings to tune it to itself as above.

Most often, the ukulele string is flat. To tune higher, turn the tuning peg counter-clockwise

For a high G 4th string, fret it at the second and play with the first string

THIS IS FOR EDUCATIONAL USE ONLY - NOT FOR SALE

Picking - Open strings

Remember the notes of the open strings.....**G C E A**

Play each one individually by pushing down and away from yourself with your right thumb until it slips off the string and you hear the note.

Then, mute (quiet) the note by putting your thumb on that string, or mute all of the strings by placing right hand lightly on the strings (rest position).

Play each string and tap your foot four times before bring your thumb back to the string - play each string 4 times, then move to the next string - begin at the 4th

A----- A A A A rest 2 3 4-----1
E----- E E E E-rest 2 3 4-----2
C-----C C C C-rest -2 3 4-----3
G-G G G G -rest 2 3 4-----4

Play the same now without looking at the uke

Let's play along as we sing a familiar tune –

Play the open 3rd string C for C and the 4th string G for G

Pick once for each word in Row, Row...

Row, Row, Row Your Boat First note = C (open 3rd string)

C

Row, row, row your boat, gently down the stream

G C

Merrily, merrily, merrily, merrily, life is but a dream!

Swing Low, Sweet Chariot First note = sing E (open 2nd string)

C G

Swing low, sweet chariot, comin' for to carry me home

C G C

Swing low, sweet chariot, comin' for to carry me home

The C Scale

We will often play in the key of C major. C is the "root" note, we begin there.

This key, **C** uses a scale consisting of the notes **C D E F G A B C**

You may have played this major scale on a piano as the white keys, starting at C. Note also the black keys, called sharps or flats - these are not used in the C scale. To develop any scale you count the steps, including sharps using 221 2221 formula

C	C#	D	D#	E	F	F#	G	G#	A	A#	B	C	All the notes		
C	2	D	2	E	1	F	2	G	2	A	2	B	1	C	C scale
	2		2		1		2		2		2		1		Steps - this works for any major scale

For any scale, remember 2 2 1 2 2 2 1 steps- like a phone #

There is no note between E and F or B and C. This is a good thing to remember visualize a keyboard

Play the scale using only the third string - C string -frets 0, 2, 4, 5, 7, 9, 11, and 12 Starting at the nut (open), go up 2 frets, play. Then, go up 2 more, then 1, 2, 2, 2, 1

You could also find these notes near the nut and play it there to economize n motion (always a good idea) and avoid moving your left hand up the neck. Try it.

Begin at C on the open 3rd string, up 2 frets for D, move to the open 2nd string for E, then up 1 fret to the F, up 2 to G. then play the open first string for A, up 2 for B and lastly up 1 for C. The intervals are exactly the same, we are just using the open strings because they will work for this C scale.

One excellent way to improve is to learn this scale and play it every day until you don't have to look at your left hand. You will soon be able to play it smoothly, still thinking about the notes. Many jazz musicians warm up by playing scales.

Introduction to Chords

A chord is a group of notes played at the same time - play strings 4, 3 and 2 GCE=C

Remember the C scale with the notes

C D E F G A B C

We could assign numbers to each note relative to C **1 2 3 4 5 6 7 1**

C E G

If we start at C and choose every other note, we get a **C major chord, C E G – 1 3 5**

Play one, skip one, play one, skip one - begins again at 1

For the ukulele, we have 4 strings, so you could play are 2 C's in the C chord GCEC

These are in a different order and will have a different sound than CEG

Let's look at your first chord - **C**. Place your left ring finger behind the third fret of the first string as illustrated below - this changes the 1st string A to C for GCEC.

Remember the C scale

Ring finger of left hand just behind third fret of the first string

Fingering - 1=index, 2=long finger, 3=ring finger, 4=small finger

Your next chord - C7

When you lower the pitch of the first string to Bb, fretting it at the first fret rather than the 3rd, and add this note to the C chord GCE, it is called a C7 chord GCEBb.

Three Rules: 1. Smile 2. Just keep strumming 3. Big finish

Strumming - right hand - two methods:

1. Hold hand palm towards chest

- point index finger at yourself

Strum down with back of index fingernail

Can strum up index finger pad

2. Strum with thumb only - best for down only, softer effect

- Strum comes from wrist – always keep it loose and easy,

like shaking water off your hand

C Chord - Ring finger left hand 3rd fret first string

Strum Patterns: D=down U=up Count 1,2,3,4, 1,2,3,4

Tap your foot on all beats- 1, 2, 3, 4 or 1 and 2 and 3 and 4 (1+2+3+4+)

The 4 horizontal lines above represent the 4 strings as if the ukulele were laid before you on a table. G C E A fourth string to first string. The numbers show the position that you fret the string. In this example, fret the 3rd fret of the second string for G, play it 5 times, then 1st string open for A. The vertical lines represent bars between measures – a way of organizing the music. This format is called tablature or TAB for short.

What Key are we in? Always try to determine before playing the song

Why would you want to take the time to sort this out? To this point, we have almost exclusively played in the key of C. This key uses chord shapes at the nut that are relatively easy to form. What if you found your vocal range could not sing all of the notes in the melody? One could remain mute, or change the key (transpose) to one that is manageable.

The **key** determines the **scale** and a group of chords that work well together. The key is also the root note. You can use the scale to determine the chords used in the key. You already know how to determine the scale (221-2221). Let's look at the chords in the key of C major. Write the scale. Then, to number chords, start from the root C and count –using roman numerals for chords (2, 3 and 6 are minor chords and usually denoted as lower case. 7 is a diminished chord.

So... C=I, D=ii, E=iii, F=IV, G=V, A=vi, B=VII⁰. You can use your fingers to count the I, IV and V. Let's look at a chart with the chords from the C scale. You will see some of these soon.

Key	I	ii	iii	IV	V	vi	vii ⁰	#/b's
C	C 	Dm 	Em 	F 	G 	Am 	Bdim 	None

If you look at the songs we've played, mostly, we've used the I, IV and V chords – C, F and G – each has its own character – I is the home chord, IV is the away chord and V is the tension chord that wants to resolve back to the home. We've also used the minor chords, vi and ii, and we are ready to get to the iii. Minor chords tend to have a wistful or sad character.

How to tell the key of a song

The key is often the chord that the song ends with and sometimes begins. Or, find the major chords and look for the one farthest separated from the others. You can read the key if you are reading music from a staff- C has no sharps or flats, - F has Bb, G has F#, Remember **F** = 1 Flat For sharps, **GDA**=1,2,3 sharps (**G**reen **D**opey **A**lligator)

Work out the scale for each using 221-2221, you'll find the sharps and flats

Look for transitions between a potential V7 to I chord and see if it all fits

Try to determine the key of every song as you begin to look it over. Then look for any unexpected chords. Also, the structure of the song – is there a chorus? Sung many times or once at beginning? Is there a bridge? If things don't seem to fit, perhaps the song is in a minor key – does it sound sad or pensive? The "relative" minor key is the vi, so start there and see if this fits as an alternative – the key of Am also has no sharps or flats like the key of C.

Two new minor chords - **D minor G minor** and an easy **B7**

Dm easy from F - just put your ring finger on the third string second fret

F x4, Dm x4, F x4, Dm x4 F x2, Dm x2, F x1, Dm x1

Gm from Dm, move ring finger to third fret of second string, then slide long finger over to third string second fret, then put index finger on first string first fret **Play Gm x4, Dm x 4, repeat then Gm x2, Dm x2**

Em Place your ring finger (#3) on the fourth fret of the third string, then put your long finger on the second string, third fret and then your index finger on the first string second fret. Remember, you can play a F#7 just by moving this shape toward you. These 2 chords are often paired in songs like the bridge (part between sections) in Elvis's Can't Help Falling in Love with You

Minor chords have a flatted 3rd

So for a C m chord, let's look to the C scale **C D E F G A B C**

Assign numbers relative to C

1 2 3 4 5 6 7 1

C chord is

C E G

C minor chord has flat 3rd – Eb

Now, challenge yourself to sort out the notes of a Dm chord. The

D scale is D E F# G A B C# D - (you could use 221-2221 to find this)

D chord D F# A 1 3 5

The Blues - New Chords – E, A, A7 and B7

A is similar to **Am**, but with your index finger added on the third string, first fret. **A7** has the A on the fourth string down 2 steps to G, so remove the long finger and play the open G.

To play **D**, rotate your wrist to the left and move your long finger over to the third string, second fret and put your index on fourth string second fret and ring on second string second fret. Play **D7** by not fretting the 3rd string.

Then to play **E7**, move your index finger back to the fourth string, first fret and your ring finger over to the first string second fret.

Play **A**, **D**, **E7** These chords work well together and are particularly useful for playing blues songs. Try plucking each string to make sure you are playing clean.

Perhaps try some new strums like down/down/up/up/down

A x8, D x8, E7 x8. A x4, D x4, E7 x4. A, D and E7 then play

AAAA A7A7A7A7 DDDD D7D7D7D7 E7E7E7E7 DDDD

7th chords made by adding a flatted 7th with the 1 3 5 triad

For instance, the scale is A B C# D E F# G# A

So A7 includes 1 3 5 b7 A C# E and **G** (the flatted 7th)

HOW LONG BLUES

BY LEROY CARR

Key of A First note=A

A **A7**
How long, baby how long,

D **D7**
Has that evening train been gone?

A **E7** **A**
How long, how how long, baby how long?

Went to the [A] station, didn't see no [A7] train.
Down in my [D] heart, I have an aching [D7] pain.
How [A] long, how how [E7] long, baby how [A] long?

I feel dis[A]gusted, I feel so [A7] bad
Thinking 'bout the [D] good time that I once had [D7] had.
How [A] long, how how [E7] long, baby how [A] long?

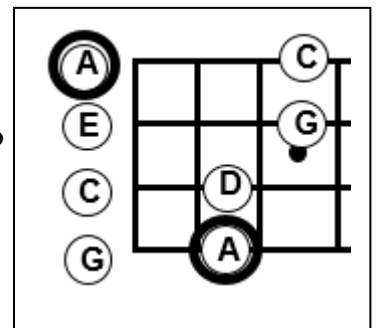

I could see the [A] green grass growing on the [A7] hill;
I ain't seen no [D] greenback on a dollar [D7] bill.
How [A] long, how how [E7] long, baby how [A] long?

You're gonna be [A] sorry you'll feel so [A7] blue.
When you want [D] me, baby, I declare I want, want [D7] you.
How [A] long, how how [E7] long, baby how [A] long?

Solo on Verse - use notes from blues scale box below
Start on the higher E and just play around to find the melody

Don't have no [A] money for to ride the [A7] train.
I would ride the [D] rails, baby, to be with you a[D7]gain.
How [A] long, how how [E7] long, baby how [E] long?

How [A] long, baby how [A7] long
Must I [D] keep my, my watching [D7] point?
How [A] long, how how [E7] long, baby how [A] long?

Pinch the strings between right thumb and index or long finger

Congratulations! You have arrived – at the crossroads – you now need to choose whether you will languish in a state of uke Bb ignorance, or take on a challenge – **the Bb chord** – believe me, it’s worth it. This will enable you to play in the key of F – many uke songs are in F – and this is the first step towards moving up the neck.

The key to getting this chord is the pinch on the first 2 strings with your index finger – you may need to move your thumb more to the back of the neck. Once you have it, play these 2 strings to see if the sound is clear. Adjust until it is.

Then, just place your long finger on the third string second fret and ring finger on the fourth string third fret.

Again, play each string individually to seek out a plunker. If it’s a bit off, play it that way for now, but practice getting this chord to ring clear. Move it up two fret to the 3rd fret and play C - pretty easy? You could play it at the 5th fret for D.

This is the great thing about moveable chords – we will learn others too. For now, let’s learn a chord progression in key of F - F Bb C – and a new way to play C – at the III fret – slide the Bb up to the III fret

Play 8 strums on each chord, then 4 strums per chord

We have played songs in the keys of C, A, F and G. I play the song America the Beautiful in G because it fits my vocal range, meaning I can sing the melody. If you wanted to play it in C, because the chords were more manageable or your vocal range were different, you could identify each chord as its number and substitute a different key's corresponding chords. Again, once you have found the key, (I chord), sort out what the IV and V chords (use fingers if necessary) so you will know what will fit. Find some uke tab to songs you like and find the key, then the I, IV and V. The next song demonstrates chord position and transposing try in C, then F.
